JAYENDRA ADAM

Senior Salesforce Developer | Platform Developer I & II | Apex | LWC | Salesforce Flows | REST/SOAP Integrations | Agentforce
Pune, Maharashtra, India | +91 91306 03440 | adamjays96@gmail.com | linkedin.com/in/jayendra-adam-663b263b0

PROFESSIONAL SUMMARY

Senior Salesforce Developer and **Salesforce Certified Platform Developer I and II** with **6+ years** building enterprise solutions on **Sales Cloud**, backed by **8 years in IT**. Hands-on expert in **Apex** (triggers, Batch, Queueable, Scheduled, Dynamic), **Lightning Web Components (LWC)**, Aura, **SOQL/SOSL**, **Salesforce Flows**, and secure **REST/SOAP integrations** with **MuleSoft**, Spring Boot, and AWS. Delivered production **Agentforce** agents using **Agent Builder**, **Retrieval-Augmented Generation (RAG)**, and **Salesforce Data Cloud** grounding. Engineered a reusable Apex callout framework and a metadata-driven trigger framework sustaining **95%+ code coverage**, deployed through **Copado and GitLab CI/CD**. Senior Developer and Administrator for a **100+ user** production org; leads code reviews, mentors junior developers, and owns end-to-end delivery from requirement analysis through hypercare.

CERTIFICATIONS

- **Salesforce Certified Platform Developer II (PD II)** — 2026
- **Salesforce Certified Platform Developer I (PD I)** — 2025

TECHNICAL SKILLS

Salesforce Platform: Sales Cloud, Lightning App Builder, Custom Objects and Data Modeling, Governor Limits, Bulkification, Large Data Volumes (LDV), Sandbox and Release Management, Reports and Dashboards, Web-to-Lead.

AI and Agentforce: Salesforce Agentforce, Agent Builder, Agent Script, Topics and Actions, Retrieval-Augmented Generation (RAG), Prompt Engineering, LLM Grounding, Einstein Trust Layer, Salesforce Data Cloud (Data Module, Data Ingestion, Identity Resolution, Segmentation), Knowledge Base Ingestion (PDF and Unstructured Data), Conversational AI, AI Agent Architecture and Design, Generative AI Applications

Apex Development: Apex Classes, Apex Triggers, Trigger Frameworks (Handler Pattern), Service Layer Patterns, Batch Apex, Queueable Apex, Future Methods, Scheduled Apex, Dynamic Apex, SOQL, SOSL, DML, Apex Sharing, Test Classes, Code Coverage, Debug Logs, Performance Tuning

Lightning and UI: Lightning Web Components (LWC), Lightning Message Service (LMS), Lightning Data Service (LDS), Wire Adapters (getRecord), lightning-record-form, Aura Components, Visualforce Pages, JavaScript (ES6+), HTML5, CSS, Salesforce Lightning Design System (SLDS), Jest Unit Testing

Automation: Salesforce Flow, Screen Flow, Record-Triggered Flow, Flow Orchestration, Flow Builder, Approval Processes, Validation Rules, Assignment Rules, Escalation Rules, Workflow Rules, Process Builder

Integration — Outbound: Apex Callouts (HTTP, REST, SOAP), Named Credentials, Remote Site Settings, OAuth 2.0 and JWT Authentication, Connected Apps, MuleSoft, Spring Boot, AWS-Hosted Services, Retry and Error Handling, Queueable Chaining

Integration — Inbound: Apex Web Services (@HttpGet, @HttpPost, @HttpPut, @HttpDelete), Apex REST Resources, Standard REST API, SOAP API, Bulk API, Platform Events, Change Data Capture (CDC), Metadata API, JSON and XML, Event-Driven Architecture

Security and Governance: Profiles, Permission Sets, Permission Set Groups, Role Hierarchy, Sharing Rules, Organization-Wide Defaults (OWD), Manual and Apex Sharing, Field-Level Security, Multi-Factor Authentication (MFA), Security Auditing

Data and Migration: Data Loader, Data Import Wizard, Data Migration and Quality, Deduplication, Field Mapping, 30,000+ Record Migrations. Data Management & Migration: Salesforce Data Loader, Data Import Wizard, Data Migration & Data Quality, Deduplication, Field Mapping, and Bulk Data Migration (30,000+ records).

DevOps & Deployment: Copado, Change Sets, Git, GitHub, GitLab CI/CD, Sandbox & Release Management, SFDX, Visual Studio Code, Workbench

Data, Tools & Domain: SOQL, SOSL, Data Loader, Data Import Wizard, JIRA, ServiceNow, Agile/Scrum, JavaScript, HTML, CSS, SQL.

Architecture and Leadership: Solution and Data Model Design, Reusable Component Architecture, Technical Design Documents, Requirement Gathering, Stakeholder Management, Code Reviews, Mentoring Junior Developers, Production Support and Hypercare

PROFESSIONAL EXPERIENCE

Senior Salesforce Developer & Administrator (Consultant) — Capgemini, Pune
Apr 2022 – Present

- **Own end-to-end delivery of platform enhancements for an enterprise client Salesforce org** — requirement analysis and solution design with business stakeholders through build, test, deployment, and hypercare.
- Designed and developed complex **Apex** (triggers, Batch, Queueable, Scheduled, Future methods) and scalable **LWC and Aura** component architectures using parent-child composition, Lightning Message Service, and lifecycle hooks — **cutting overall development effort by up to 50%.**
- Engineered a custom **Field-Level Security Validation Tool in Apex** automating object- and field-level security audits, **eliminating a paid-tool dependency and saving the client ~$40,000 annually.**
- Serve as sole **Administrator and Developer for a 100+ user production org**: permission sets, role hierarchy, sharing rules, and Organization-Wide Defaults; improved data quality through clean-ups, field updates, and object-model optimization; enabled **MFA** org-wide.
- Built secure **REST and SOAP integrations** between Salesforce and **MuleSoft, Spring Boot, and AWS-hosted services** using Apex callouts, Named Credentials, and OAuth 2.0 — with retry logic, error logging, and results surfaced in LWC dashboards.
- Delivered automation with **Flow, Process Builder, and Apex Triggers**, **reducing operational effort by 40%**; built custom apps, objects, and dynamic Lightning pages via Lightning App Builder.
- Drove **code reviews** and Apex/LWC best practices across the team and **mentored junior developers**; achieved **95%+ code coverage** with comprehensive Apex test classes and **Jest** unit tests using trigger framework and service-layer patterns.
- Managed end-to-end deployments across sandboxes and production using **Copado, GitLab CI/CD, and Change Sets**; active contributor in Agile ceremonies — sprint planning, backlog grooming, and reviews.

Senior Software Developer — Salesforce Developer & Administrator — NeoSOFT Technologies
Mar 2020 – Mar 2022

- Designed and developed **LWC and Aura components**, **reducing page load times by 30%** and improving UI responsiveness.
- Migrated applications from **Salesforce Classic to Lightning Experience**, increasing user adoption.
- Built and optimized **Apex classes, triggers, Batch jobs, and test classes** at **90–95% coverage**; designed asynchronous solutions (Batch, Queueable, Future) for **large data volumes**.
- Implemented **Flows, Process Builder, Workflow Rules, and Approval Processes**, **cutting operational effort by 40%**.
- Developed custom **Visualforce pages with automated PDF generation**, reducing document preparation from hours to minutes.
- Executed **data migration** of **30,000+ records** using Data Loader and Data Import Wizard, ensuring referential integrity through field mapping, deduplication, and validation rules.

KEY PROJECTS

- **Agentforce AI Agent Implementation — Employee and Service Agents:** Built two production AI agents using Salesforce Agentforce Agent Builder and Agent Script with Retrieval-Augmented Generation (RAG). Ingested unstructured PDF knowledge bases and connected structured enterprise data via Salesforce Data Cloud (Data Module) as grounding sources, secured by the Einstein Trust Layer. Iteratively engineered LLM prompts to deliver accurate, context-aware Q&A, enabling conversational self-service that reduced manual query resolution time.
- **Salesforce–MuleSoft Integration Layer:** Designed a reusable Apex callout framework integrating Salesforce with MuleSoft, Spring Boot, and AWS-hosted services — secure, error-handled integrations surfaced in LWC dashboards.
- **Metadata-Driven Trigger Framework with Service Layer:** Implemented one trigger per object dispatching to handler classes, controlled by Custom Metadata for per-event enable/disable and user bypass — standardized team development at 95%+ test coverage.
- **Outbound REST API Integration with Resilient Error Handling:** Built Apex callouts consuming external REST APIs via Named Credentials and OAuth 2.0, with Queueable chaining, automatic retry, error logging, and results surfaced in an LWC dashboard.
- **Event-Driven Integration using Platform Events and CDC:** Delivered publish-subscribe integration: Platform Events consumed by Apex subscribers for near real-time updates, plus Change Data Capture on key objects with live LWC updates via Lightning Message Service.
- **Lightning Modernization Application (LWC and Lightning Data Service):** Rebuilt a Classic-style record page as a Lightning Experience page using custom LWCs with wire adapters (getRecord), lightning-record-form, and Lightning App Builder with conditional visibility and org-default activation.

- **Enterprise Data Migration Program:** Executed end-to-end migration of 30,000+ records using Data Loader and Data Import Wizard — field mapping, deduplication, validation rules, and integrity sign-off.

EDUCATION

Bachelor of Computer Applications (BCA) — Solapur University, Maharashtra | 2014 – 2017
