CERTIFICATIONS

- **Salesforce Certified Platform Developer I (PD I)** — 2025
- **Salesforce Certified Platform Developer II (PD II)** — 2026

PROFESSIONAL SUMMARY

Senior Salesforce Developer with 6+ years delivering enterprise Salesforce solutions end to end — requirement analysis, solution & data-model design, Apex and LWC/Aura development, integrations, deployments and post-production support (8+ years in IT including 2 years of Angular and QA Testing). Currently the senior Salesforce Developer & Admin for a client at Capgemini, Pune: advanced asynchronous Apex, complex Lightning component architecture with Jest testing, MuleSoft & REST integrations, declarative automation, and release management with Copado/GitLab CI-CD. I can deliver high-quality solutions, contribute hands-on to development and architecture, and mentor team members while supporting overall project success.

TECHNICAL SKILLS

- **Salesforce Development:** Apex, Apex Triggers, Batch Apex, Queueable Apex, Future Methods, Scheduled Apex, Dynamic Apex, Lightning Web Components (LWC), Aura Components, Visualforce, SLDS, Apex Sharing, Test Classes, Jest, Large Data Volumes (LDV)
- **Design & Architecture:** Solution & Data Model Design, Trigger Frameworks & Service Layer Patterns, Code Reviews, Mentoring Junior Developers, Performance Tuning, Reusable Component Architecture
- **Automation & Security:** Flow Builder, Process Builder, Workflow Rules, Approval Processes, Validation Rules, Assignment & Escalation Rules, Profiles, Permission Sets, Role Hierarchy, Sharing Rules, OWD, Field-Level Security, MFA
- **Integration — Outbound (Salesforce → External Systems):** Apex Callouts (HTTP/REST/SOAP), Named Credentials, Remote Site Settings, OAuth 2.0 authentication, consuming external APIs from MuleSoft, Spring Boot & AWS-hosted services, rendering responses in LWC
- **Integration — Inbound (External Systems → Salesforce):** Apex Web Services (custom REST resources — @HttpPost, @HttpGet, @HttpPut, @HttpDelete), Standard SOAP & REST APIs, Bulk API, Platform Events & Change Data Capture for event-driven integration
- **Clouds & Platform:** Sales Cloud, Service Cloud, Web-to-Lead, Email-to-Lead, Lightning App Builder, Reports & Dashboards
- **DevOps & Deployment:** Copado, Change Sets, Git, GitHub, GitLab CI/CD, Sandbox & Release Management, SFDX, Visual Studio Code, Workbench
- **Data, Tools & Domain:** SOQL, SOSL, Data Loader, Data Import Wizard, Data Migration & Quality, JIRA, ServiceNow, Agile/Scrum, JavaScript, HTML, CSS, SQL, Angular

PROFESSIONAL EXPERIENCE

Senior Salesforce Developer & Admin (Consultant) | Capgemini, Pune

Apr 2022 – Present

- **Ownership:** Own end-to-end delivery of platform enhancements for the client's Salesforce org — requirement analysis and solution design with business stakeholders through build, test, deployment and hypercare.
- **Development:** Design and develop complex Apex (triggers, Batch/Queueable/Scheduled/Future) and scalable LWC/Aura component architecture (parent-child composition, event communication, lifecycle hooks), cutting overall development effort by up to 50%.
- **Code Quality:** Drive code reviews and Apex/LWC best practices across the team and mentor junior developers; achieve 95%+ code coverage with comprehensive Apex test classes and Jest unit tests; apply trigger framework and service-layer patterns for maintainable code.
- **Integration:** Design and build secure REST/SOAP integrations between Salesforce and multiple external platforms (MuleSoft, Spring Boot, AWS services) using Apex callouts and Named Credentials.

- **Innovation:** Built a custom Field-Level Security Validation Tool in Apex automating object- and field-level security audits — eliminated paid-tool dependency, saving the client ~\$40,000 annually.
- **Administration:** Serve as primary Admin + Developer for 100+ users: permission sets, role hierarchy, sharing rules, OWD; improved data quality via clean-ups, field updates and object-model optimization; enabled MFA org-wide.
- **Automation:** Delivered automation with Flows, Process Builder and Apex Triggers reducing operational effort by 40%; built custom apps, objects and dynamic Lightning pages via Lightning App Builder.
- **Release Management:** Manage end-to-end deployments across sandboxes and production (Change Sets, version tracking); active contributor in Agile ceremonies — sprint planning, backlog grooming, reviews.

Senior Software Developer — Salesforce Developer & Admin | NeoSOFT Technologies

Mar 2020 – Mar 2022

- **Lightning Development:** Designed and developed LWC and Aura components improving UI responsiveness and reducing page load times by 30%; migrated applications from Salesforce Classic to Lightning Experience, improving user adoption.
- **Apex & Asynchronous:** Built and optimized Apex classes, triggers, batch jobs and test classes (90–95% coverage); designed asynchronous solutions (Batch, Queueable, Future) for large data volumes.
- **Automation:** Implemented Flows, Process Builder, Workflow Rules and Approval Processes, cutting operational effort by 40%; developed custom Visualforce pages with automated PDF generation, reducing document preparation from hours to minutes.
- **Data Migration:** Executed data migration projects using Data Loader and Import Wizard, ensuring integrity of 30,000+ records.

Software Developer — Angular | NeoSOFT

Mar 2018 – Mar 2020

- **Front-End Development:** Developed Angular applications with reusable components and services; built secure, optimized RESTful API integrations; improved load times 30% using RxJS and lazy loading.

KEY PROJECTS

- **Salesforce–MuleSoft Integration Layer** — Reusable Apex callout framework integrating Salesforce with MuleSoft, Spring Boot and AWS-hosted services — secure, error-handled integrations surfaced in LWC dashboards.
- **Metadata-Driven Trigger Framework with Service Layer** — One trigger per object dispatching to handler classes, controlled by Custom Metadata for per-event enable/disable and user bypass — standardized development with 95%+ test coverage.
- **Outbound REST API Integration with Resilient Error Handling** — Apex callouts consuming external REST APIs via Named Credentials (OAuth 2.0): Queueable chaining, automatic retry with error logging, results surfaced in an LWC dashboard.
- **Event-Driven Integration using Platform Events & CDC** — Publish-subscribe integration: Platform Events consumed by Apex subscribers for near real-time updates; CDC on key objects with live LWC updates via Lightning Message Service.
- **Lightning Modernization Demo App (LWC & Lightning Data Service)** — Rebuilt a classic-style record page as a Lightning Experience page: custom LWCs with wire adapters (getRecord), lightning-record-form, Lightning App Builder with conditional visibility and org-default activation.
- **Enterprise Data Migration Program** — End-to-end migration of 30,000+ records (Data Loader, Import Wizard) — field mapping, deduplication, validation rules and integrity sign-off.

EDUCATION

Bachelor of Computer Applications (BCA) — Solapur University, Maharashtra

2014 – 2017
